Right angle type for milling straight corners

Right angle implies "straight angle." The right angle type end mill features a unique geometry that maintains a consistent cutting diameter even with a gash land.

Ability to mill straight corners while maintaining cutting edge rigidity.

Right Angle Type

Square Type

KEY FEATURES: AE-VTSS

1. Anti-Vibration Carbide End Mill Compatible with Sliding Head Lathes

2. Length of cut 1,5 × D or less
   Ø3~Ø5: 1,5 × D or less
   Ø6~Ø12: 1 x D

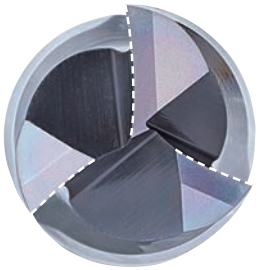
3. Overall length 50mm or less
   Ø3 ~ Ø10: 45mm
   Ø12: 50mm

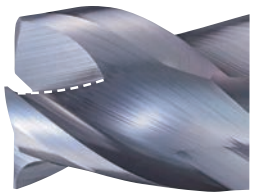
AE-VTSS: THE A-BRAND END MILL

Multi-functional and highly efficient machining
3-flute specification and bottom cutting edge hook shape

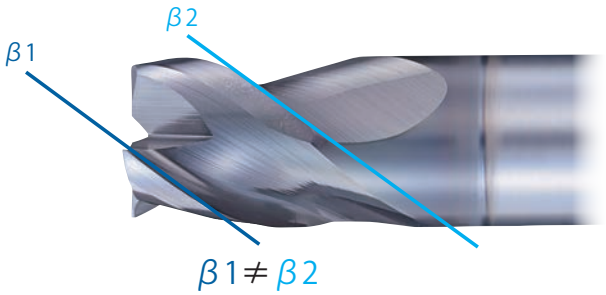
Stable chip shape and improved chip evacuation
Can be used for a wide variety of processing such as plunging

AE-VTSS	Conventional
	
Chip shape from plunging	Work Material : SUS304





Unequal spacing of teeth and variable-lead geometry



Stable and high efficiency milling is made possible by the suppression of chattering

CUTTING DATA

Work Material: SCM435
Bar Material Ø12
Machine: CNC sliding head lathe
Coolant: None
Dry machining is used for filming purposes

Milling Part	Milling Process	Milling Method	Tool	Cutting Speed (m/min)	Feed (mm/min)	ap (mm)	ae (mm)
Face	Roughing	D-cut (Frontal Milling)	AE-VTSS Ø12	90 (2,400min^{-1})	200 (0.028mm/t)	1,4×2 times	9,8
	Finishing					0,2	10
Slot	Roughing	Plunging	AE-VTSS Ø4	70 (5,600min^{-1})	115 (0.021mm/rev)	1,2	–
		Slot Milling			500 (0.03mm/t)	1,2	4
	Finishing	Plunging			115 (0.021mm/rev)	0,1	–
		Slot Milling			500 (0.03mm/t)	0,1	4

For roughing of the slot, the same machining is performed twice to secure a depth of 2.5mm.

Processed shape

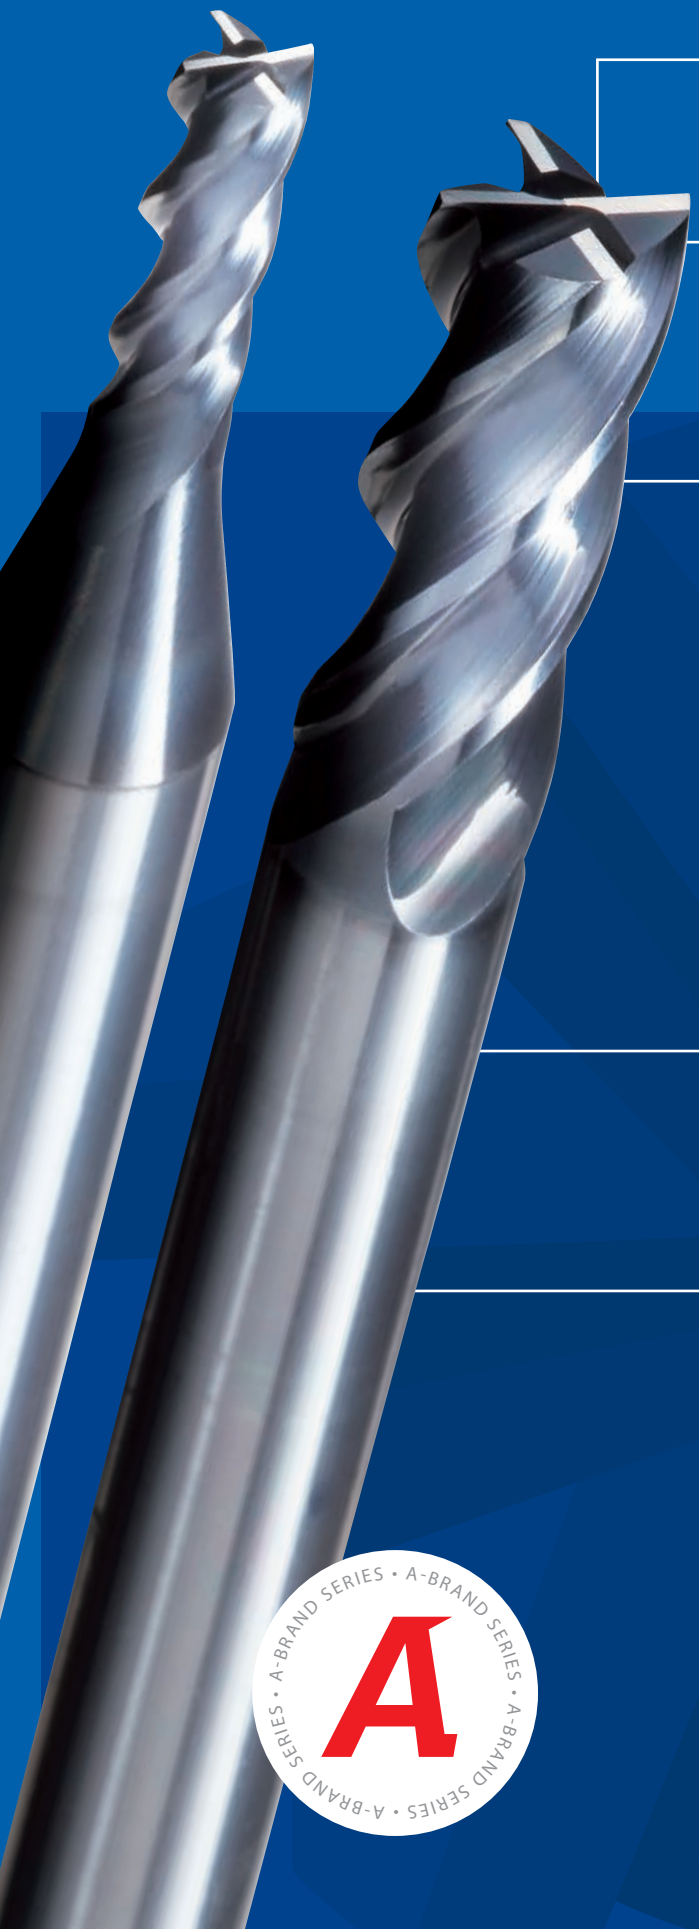
KEY FEATURES: AE-VMS • AE-VMSS

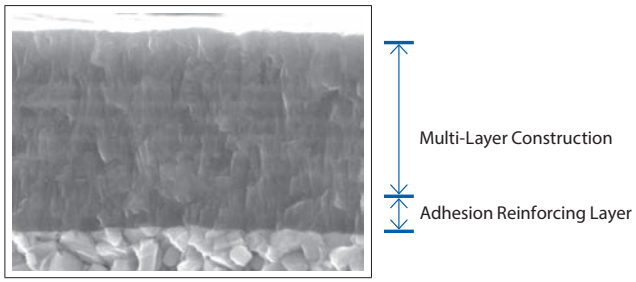


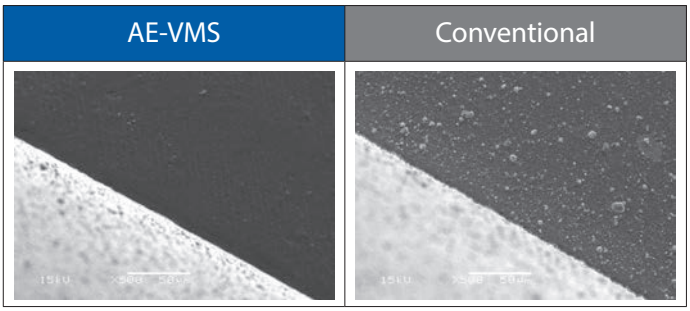
1. Duarise coating
2. Positive rake angle
3. New flute form
4. High rigidity
5. Solid carbide

A-BRAND SERIES • A-BRAND SERIES • A-BRAND SERIES • A-BRAND SERIES

Duarise coating

The new duarise coating provides excellent lubricity, superior friction-resistance and high oxidation temperature. Multi-layer construction minimizes the thermal cracks that often occurred while using water-soluble oil.





Smoothing surface coating treatment made an excellent quality of surface finishing.

Positive rake angle

A stable performance is gathered by reducing cutting forces as a result of a sharp and positive rake angle.

New flute form

The new flute form with its excellent chip evacuation properties enables stable milling and the suppression of burrs.

Figure 1. 10% lower cutting force versus the competitors

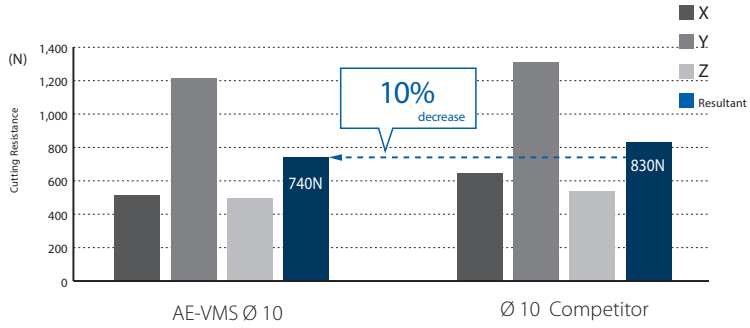


Figure 2. Stable performance even when the overhang length is L/D=4

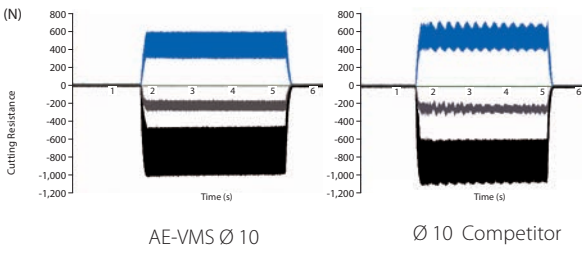
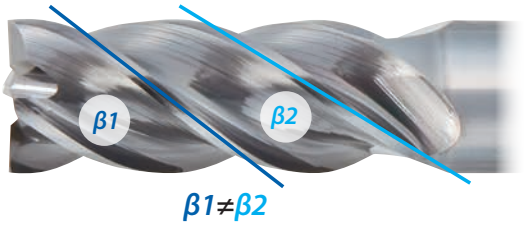
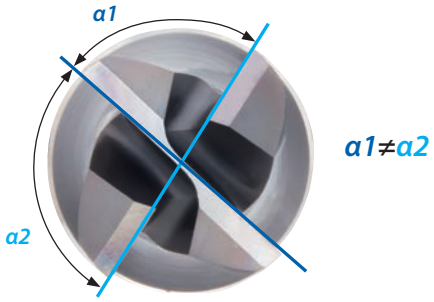


High rigidity

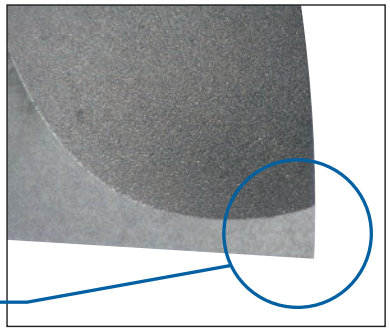
The unequal spacing of teeth and variable-lead geometry enables stable and high efficiency milling and the suppression of vibration.

Variable Leads	Unequal Spacing Teeth
	


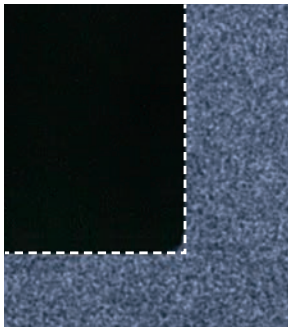


Milling straight corners with a unique cutting edge

Gash land for enhancing chipping resistance



With gash land



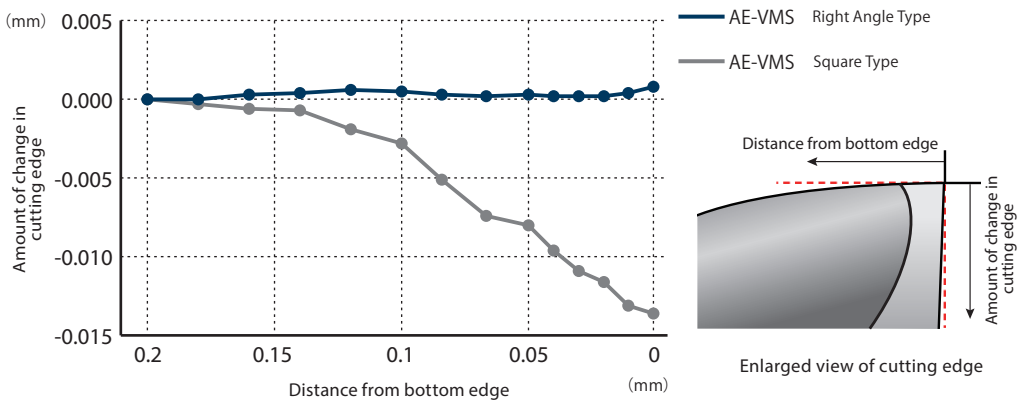
Straight corner with no uncut residue

Ability to mill straight corners while maintaining cutting edge rigidity

AE-VMS Right Angle Type	AE-VMS Square Type
	

Although the right angle type end mill includes a gash land, it is able to mill straight corners due to its unique geometry that maintains a consistent cutting diameter.

Measured value of change in cutting edge of Ø6 end mill



* The values measured are internal data. The amount of change in the cutting edge may vary depending on the individual product.

High milling quality
Straight corner

The milling of straight corners with no uncut residue is made possible by a unique cutting edge

Tool	AE-VMS Ø 3 - Right Angle

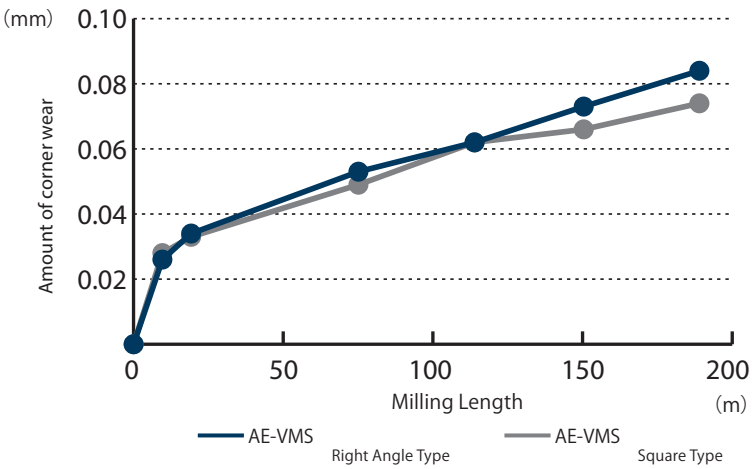
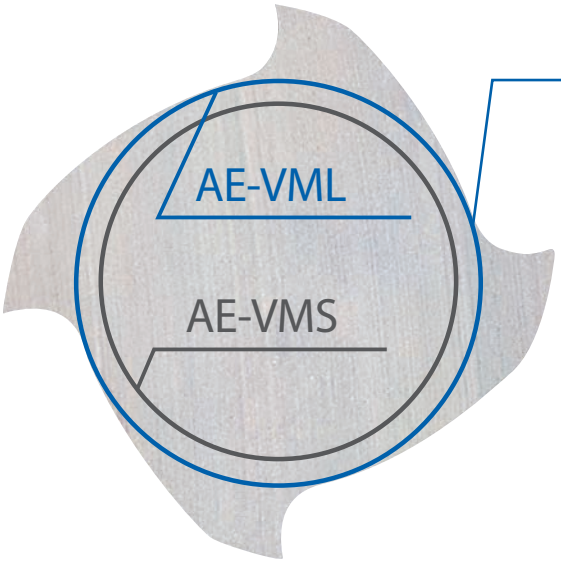
Feed	Vf=1.380mm/min (0,05mm/t)
Depth of Cut	ap=9mm(1,5D) ae=1,2mm(0,2D)
Coolant	Air Blow



KEY FEATURES: AE-VML

1. Duarise coating
2. Microrelief geometry
3. For high-speed side milling
4. Long flutes
5. Solid carbide

AE-VML: ULTIMATE SIDE MILLING EFFICIENCY



High Rigidity

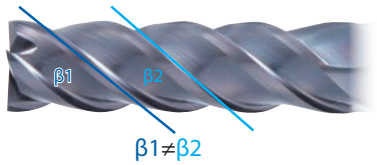
High-speed side milling is made possible by the large thick core design. The web taper geometry, where the thickness of core changes from the cutting edge to the shank, greatly improves tool rigidity, thereby prevents the machining surface from tilting

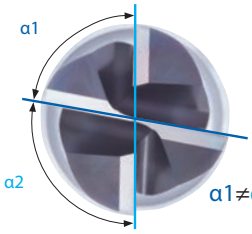
High Helix

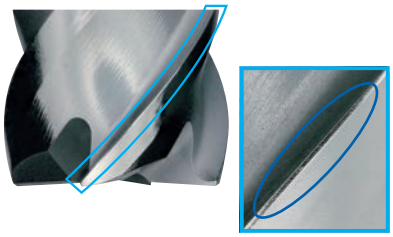
Reduces cutting force to enable stable milling

Suppression of vibration

The combination of variable lead, unequal spacing teeth and microrelief geometry contributes to stable and high efficiency milling performance.

Variable Leads	Unequal Spacing Teeth	Microrelief
		






Chattering is greatly suppressed even during high-speed, high-depth milling, resulting in unrivaled high efficiency performance.

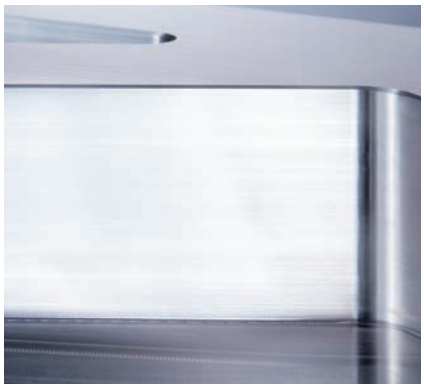
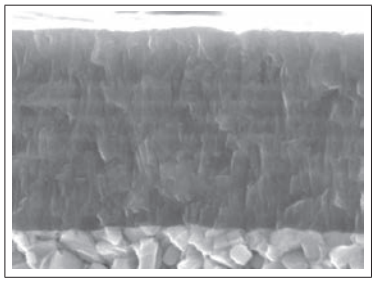
S50C
Work Material

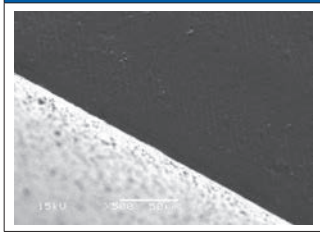
(ap) 40mm
Depth of Cut

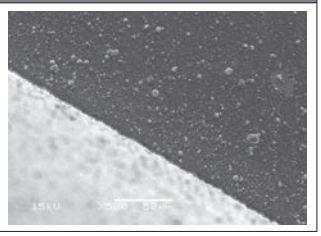


DUARISE Coating

Provides excellent lubricity, superior friction-resistance and high oxidation temperature. Multi-layer construction minimizes the thermal cracks that often occurred while using watersoluble oil.



AE-VMS	Conventional
	




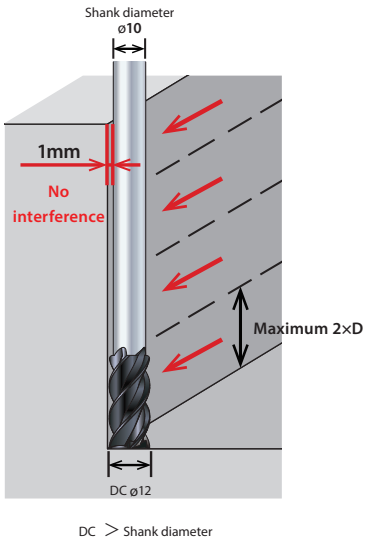
Smoothing surface coating treatment made an excellent quality of surface finishing.

Highly efficient and highly accurate deep side milling at L/D of 5 or more

2,5×D cutting length

Highly efficient deep side milling is possible with large step milling of up to 2×D*

*The recommended depth of cut varies depending on the overhang length.



DC > Shank diameter

Long length reduced shank type

Reduced shank types are tools with an outer diameter that is larger than the shank diameter

- Supports deep side milling and pocket milling of mold parts, etc.
- Supports various machining depths by changing the overhang length

R shape on the shank side edge

Suppresses streak generation by side step milling

Tool specifications engineered to suppress chattering

The combination of variable lead, unequal spacing teeth and microrelief geometry contributes to stable and high efficiency milling performance

High Efficiency - High Precision

Stable deep side milling at L/D=7

Achieves good milling accuracy with about twice the efficiency versus conventional products

1. Use a rigid and precise machine and holder.
2. The rotational speed is calculated by the median of the recommended cutting speed. Adjustment may be necessary depending on the rigidity of the workpiece fixture and machine.
3. Please use a suitable fluid with high smoke retardant properties.
4. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.
5. Please use water-soluble coolant when machining stainless steel, precipitation stainless steel, titanium alloy.
6. Reduce speed and feed as well as depth of cut when high precision is required.

1. The above milling condition is a guideline for the overhang length is 3×D.
2. Use a rigid and precise machine and holder.
3. The rotational speed is calculated by the median of the recommended cutting speed. Adjustment may be necessary depending on the rigidity of the workpiece fixture and machine.
4. Please use a suitable fluid with high smoke retardant properties.
5. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.
6. Please use water-soluble oil when machining stainless steel.
7. Reduce speed and feed as well as depth of cut when high precision is required.
8. Adjust the speed and feed accordingly when the overhang length is longer than specified.

1. Use a rigid and precise machine and holder.
2. The rotational speed is calculated by the median of the recommended cutting speed. Adjustment may be necessary depending on the rigidity of the workpiece fixture and machine.
3. Please use a suitable fluid with high smoke retardant properties.
4. During dry (no fluid) milling, please use air blow to remove disposable chips from the milling area and to eliminate chip packing.
5. Please use water-soluble coolant when machining stainless steel.

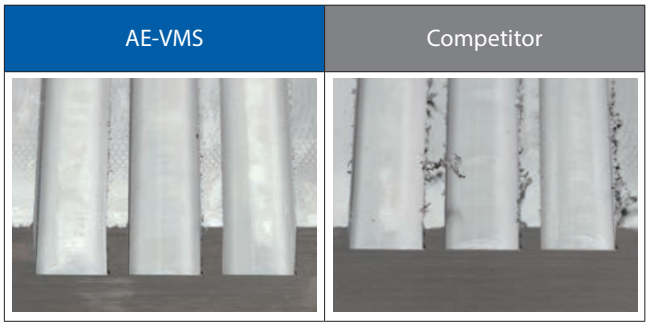
Suppression of Burrs

Great surface finish without vibration and minimal burrs.

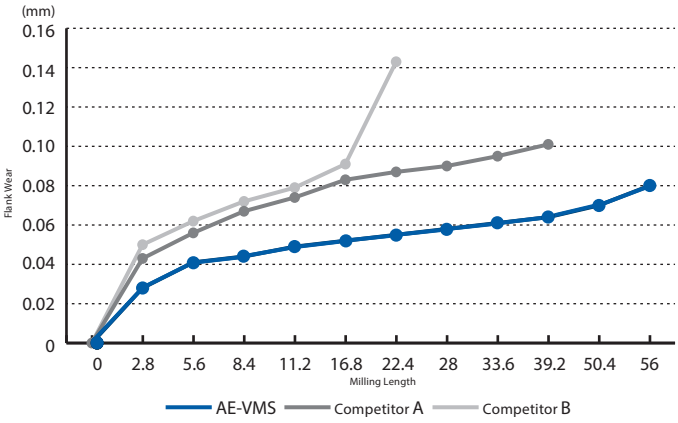
Tool	AE-VMS Ø 10	Competitor Ø 10
Work Material	SUS316	
Cutting Speed	69m/min (2.200 min^{-1})	
Feed Rate	350mm/min (0,04mm/t)	
Depth of Cut	ap = 10mm	ap=5mm
Coolant	Water Soluble	
Machine	Vertical Machining Center	
M.R.R.	35 cm^3/min	17,5 cm^3/min



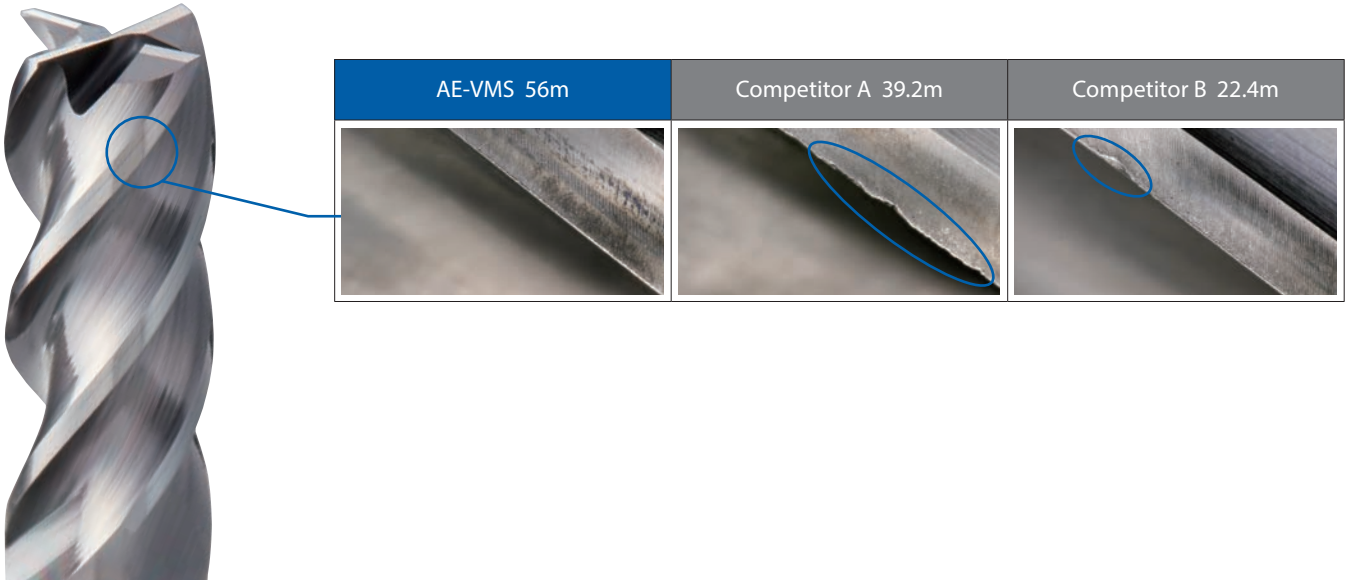
Stable Performance

Consistent tool wear with no chipping even in stainless steel slot milling.

Tool	AE-VMS Ø 10
Work Material	SUS304
Cutting Speed	70m/min (2.250 min^{-1})
Feed Rate	475mm/min (0,053mm/t)
Depth of Cut	ap = 10mm
Coolant	Water Soluble
Machine	Vertical Machining Center



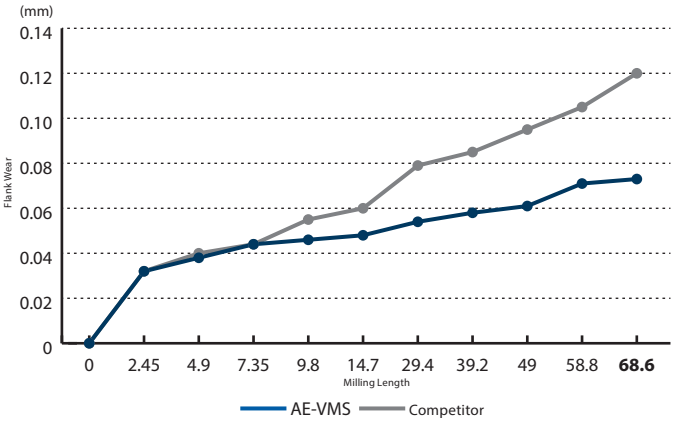
Cutting edge wear comparison



Stable performance

Stable performance even in slotting

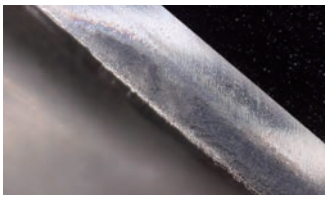
Tool	AE-VMS Ø 6 X R1
Work Material	SUS304
Milling method	Slot milling
Cutting Speed	80m/min (4.200 min^{-1})
Feed Rate	830mm/min (0,049 mm/t)
Depth of Cut	ap = 3mm
Coolant	Water Soluble
Machine	Horizontal Machining Center

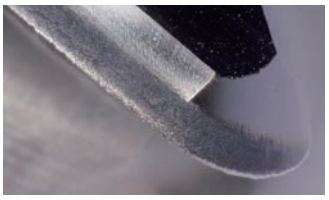


Wear comparison

Wear comparison after milling 68,6

Peripheral cutting edge		Corner radius	
AE-VMS	Competitor	AE-VMS	Competitor
			

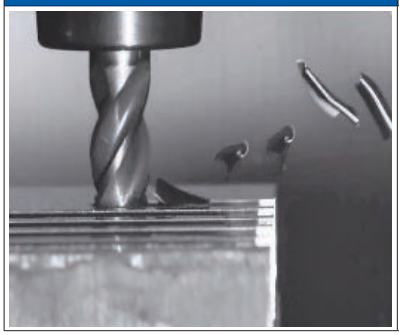


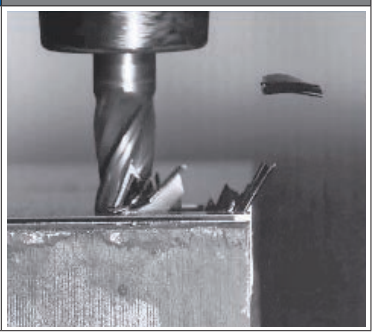


High efficiency

Trouble-free chip evacuation even in high-speed slotting

Tool	AE-VMS Ø 10 X R1
Work Material	SCM440
Milling method	Slot milling
Cutting Speed	90m/min (2.900 min^{-1})
Feed Rate	660mm/min (0,057 mm/t)
Depth of Cut	ap = 10mm
Coolant	None
Machine	Vertical Machining Center

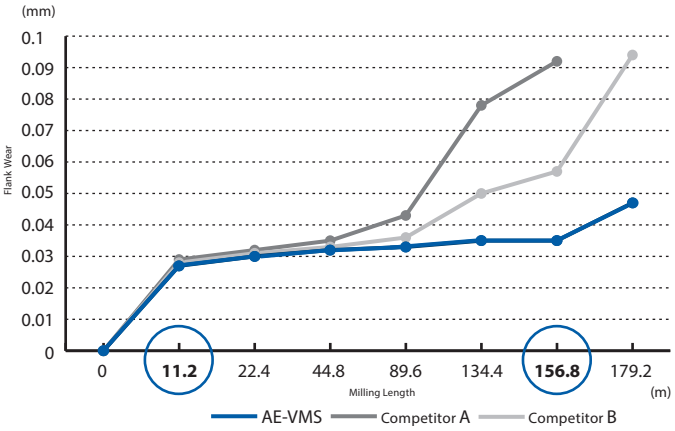
AE-VMS	Competitor
	




Suppression of Burrs

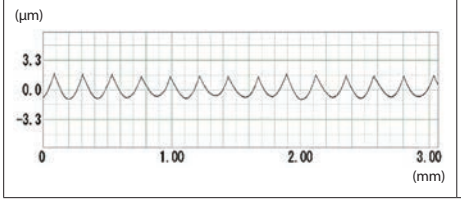
Suppression of cutting heat generation minimizes tool wear

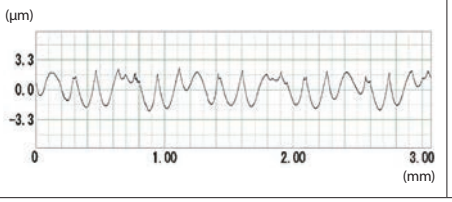
Tool	AE-VMS Ø 6
Work Material	SCM440
Cutting Speed	140m/min (7.500 min^{-1})
Feed Rate	1.800mm/min (0,06mm/t)
Depth of Cut	ap = 9mm ae= 1,2mm
Coolant	Air Blow
Machine	Vertical Machining Center

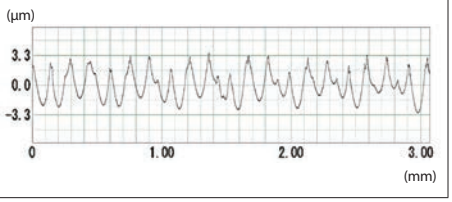


Surface roughness comparison

Surface roughness after milling 11,2m

AE-VMS (Ra: 0.6377µm)	Competitor A (Ra: 1.0747µm)	Competitor B (Ra: 1.2304µm)
		






Tool condition comparison

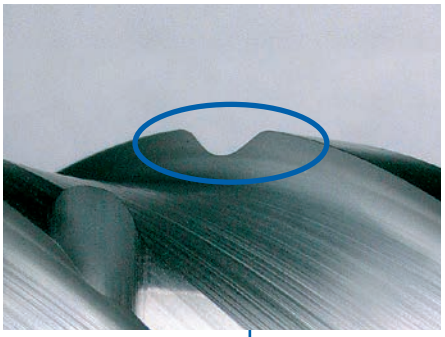
Tool condition after milling 156,8m

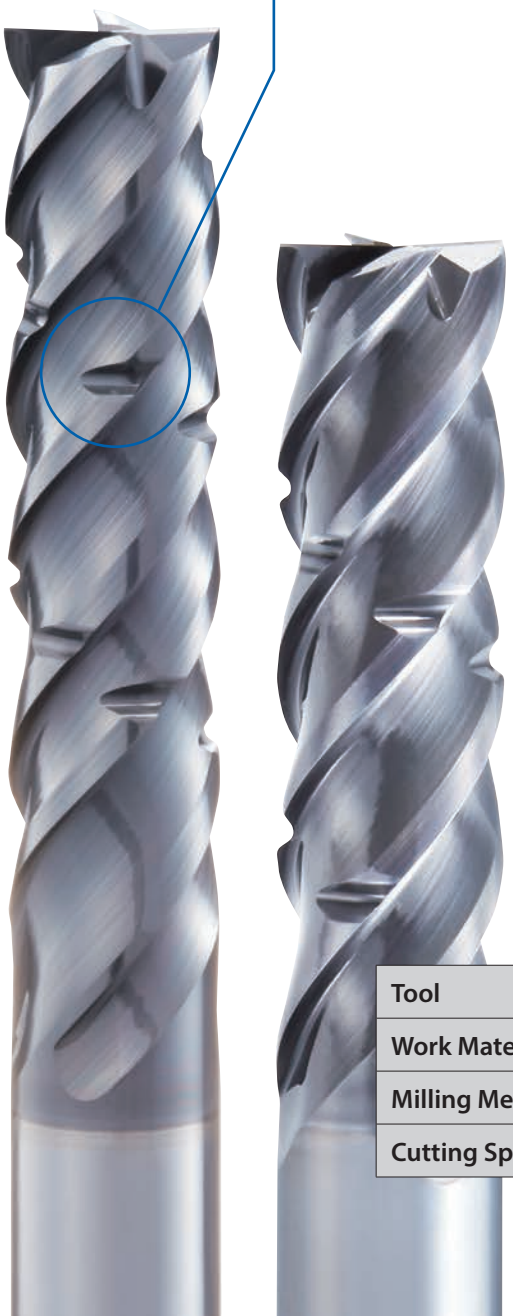
(m)

	Cutting Chips		Wear Comparison	
AE-VMS		Brown about 500°C		No Cutting Edge Recession
Competitor A		Purple about 600°C		Excessive Cutting Edge Recession
Competitor B		Blue about 700°C		Minimal Cutting Edge Recession

AE-VML: WITH CHIPBREAKER

Minimizes chipping with unique R profiles at the edge of the chipbreaker.





Troubled by long and stringy chip accumulation

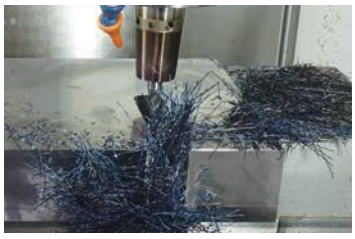
Large chip accumulation can be problematic for long-hour and high chip removal side milling, trochoidal milling, and pocket milling with long flute length end mills.

Breaks chips into small pieces!

Enables continuous machine operation

The chipbreaker (-N) creates small chips that can be easily evacuated by air or cutting oil.
For high-quality machined surfaces, we recommend the AE-VML square type without chipbreaker.

With chipbreaker added	No chipbreaker
		



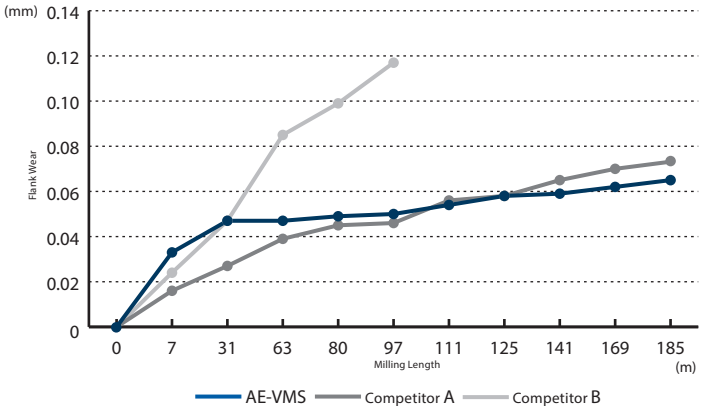
Tool	AE-VML φ10×40-N With chipbreaker
Work Material	NAK80(40HRC)
Milling Method	Trochoidal
Cutting Speed	120m/min 3,800min^{-1}

Feed Rate	1,140mm/min0.075mm/t
Depth of Cut	ap=40mm ae=0.5mm
Coolant	Air blow
Machine	BT50 Vertical Machining Center

Stable performance

Stable performance even at 4D depth of cut

Tool	AE-VML Ø 10 x 40
Work Material	S50C
Milling Method	Side milling
Cutting Speed	130m/min (4,200min^{-1})
Feed Rate	1.200mm/min (0,07mm/t)
Depth of Cut	ap=40mm ae=0.5mm
Coolant	Air Blow
Machine	Horizontal Machining Center



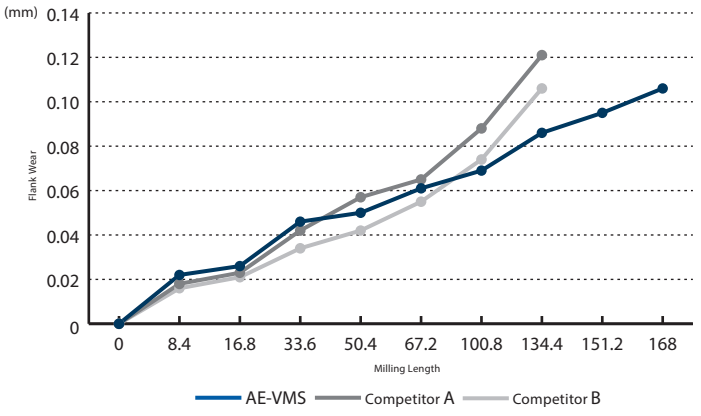
Wear comparison of the peripheral cutting edge

AE-VML 185m	Competitor 185m	Competitor 97m
		

Long tool life

DUARISE coating greatly reduces tool wear progression even with the use of water-soluble coolant.

Tool	AE-VML Ø 10 x 31
Work Material	SCM440(30HRC)
Milling Method	Side milling
Cutting Speed	180m/min (5.700min^{-1})
Feed Rate	1.400mm/min (0,06mm/t)
Depth of Cut	ap=25mm ae=1mm
Coolant	Water Soluble
Machine	Vertical Machining Center



Wear comparison of the peripheral cutting edge
