

KAV series

**NEW**

“Max L/D = 10” solves deep-boring challenges with superior chatter resistance

Unique anti-vibration mechanism provides superior anti-chatter performance
Shank diameters from 16mm to 32mm (Max L/D = 7, 10)

Variety of internal machining processes possible with interchangeable heads
Strong hold with serrated joint structure

Easy cutting edge adjustment with E-Sleeve design
Easy machining setup

Interchangeable head boring bars with anti-vibration dampener system

KAV Series

"Max L/D = 10" solves deep-boring challenges

Excellent anti-chatter performance due to unique anti-vibration design and available for a wide range of machining operations

Anti-vibration Controlled deep boring

Shank lineup

Shank diameters, from 16mm to 32mm with L/D = 7 and 10, are available
 Carbide reinforced style also available

| Shank diameter | Available overhang length range | Type |
|----------------|--|-----------------------|
| ø16 ø20 |  L/D = 4 ~ 7 | Steel |
| |  L/D = 7 ~ 10 | Carbide reinforcement |
| ø25 ø32 |  L/D = 4 ~ 7 | Steel |
| |  L/D = 7 ~ 10 | Steel |

Unique anti-vibration mechanism

Built-in proprietary damper technology dampens vibration
 Superior anti-chatter performance over carbide

Interchangeable head type

Interchangeable heads for a variety of machining applications
 Strong fastening with serrated joint structure

1 Unique anti-vibration mechanism provides superior chatter resistance

Unique vibration isolation mechanism that ensures rigidity with high dampening performance

Built-in damper technology

Absorbs vibrational energy with braking effect

High rigidity

Using heavy and short dampers
The cavity diameter is also reduced to ensure rigidity.

Principle of vibration suppression by anti-vibration mechanism (Image)

The damper vibrates late against the shank. Effective for vibration damping

Video

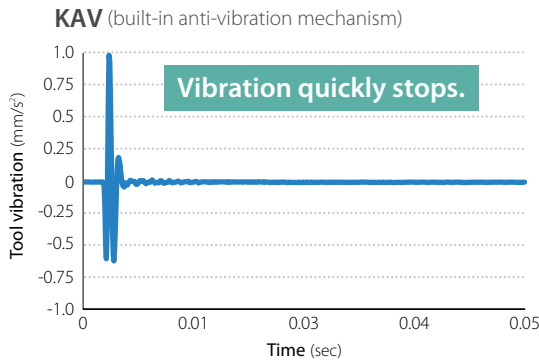

Available up to L/D = 10. Excellent anti-vibration performance over conventional carbide shanks

Hammering test (Internal evaluation)

Hammer impacts to the head of the tool
($\phi 20$, Overhang length 10D)

Vibration measurement direction

10D Shank Anti-vibration performance (Internal evaluation)

KAV maintains stable machining

Image

KAV-G20-10D / KAVH20-SCLCR09
CCMT09T304PP
Overhang length: 140 mm (7D) / 200 mm (10D)
Workpiece: SCM435

Stable machining area map (Overhang length 10D, $a_p = 0.4$ mm)

Stable machining area map (Cutting speed Vc = 100 m/min)

Unique anti-vibration mechanism provides superior anti-chatter performance against competitors

Anti-vibration performance comparison (Internal evaluation)

Competitors produced chattering. KAV maintains stable machining.

KAV

Competitor A (anti-vibration type)

Competitor B (anti-vibration type)

Surface roughness

Cutting conditions: $V_c = 150$ m/min, $a_p = 0.4$ mm, $f = 0.15$ mm/rev Workpiece: SCM435 Overhang length 320 mm

Case studies

1 Mechanical parts (Worm gears) S45C

Shank: KAV-G16-10D
Head: KAVH16-SDUCR07
Insert: DCGT070202EL-U (PV720)

$V_c = 50$ m/min
 $a_p = 0.05$ mm
 $f = 0.2$ mm/rev Wet

Overhang length: ø16-160mm (10D)

(User evaluation)

2 Mechanical parts (Worm gears) SCM435

Shank: KAV-D32-10D
Head: KAVH32-PDUNR11
Insert: DNMG110404HQ (CA515)

$V_c = 180$ m/min
 $a_p = 0.15$ mm
 $f = 0.2$ mm/rev Wet

Overhang length: ø32-200mm (6.2D)

(User evaluation)

3 Auto parts (Differential case) FCD700

Shank: KAV-G20-10D
Head: KAVH20-STLPR11
Insert: TPGB110308 (PV7005)

$V_c = 140$ m/min
 $a_p = 0.2$ mm
 $f = 0.12$ mm/rev Wet

Overhang length: ø20-160mm (8D)

(User evaluation)

2

Interchangeable heads for a variety of machining applications Strong fastening with serrated joint structure

Serrated structure

Securely fastens head and shank

Internal coolant recommended

Internal coolant recommended to prevent damage to anti-vibration mechanism

When using our plumbing parts:
Supports pressures up to 7 MPa
(some items are only recommended up to 1 MPa)

Coolant pipe connections: See page 11

Head lineup

| Shank diameter | Positive type (Screw clamp) | | | | Negative type (Lever lock) | | |

3

Easy cutting edge adjustment with E-sleeve Smooth machining setup

E-sleeve (Sold separately)

Separated structure with printed reference lines
Easy adjustment reduces setup time

Reference line

Adjusting the cutting edge position

Exclusive sleeve (E-sleeve)

Adjusting the cutting edge position with a reference line

Instruction video

Adjusting the cutting edge position is easy by simply aligning the reference line between the shank and the sleeve.

Conventional sleeve

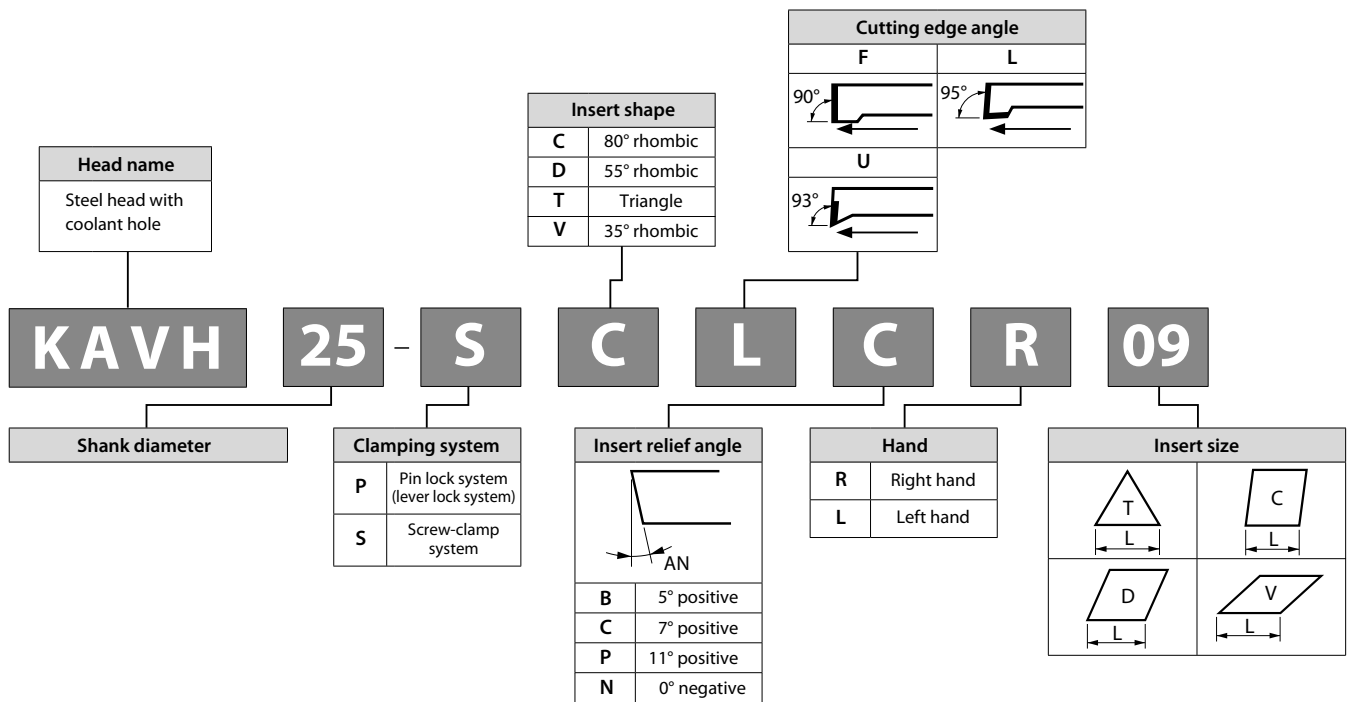

Adjusting the cutting edge position with the flat cut part of the head

Instruction video

Adjust the flat cut part of the head by moving the tool while applying a dial gauge, etc.

Replaceable boring bar head identification system

Sleeve for KAV (E-sleeve)

Sleeve dimensions

| Description | Availability | Dimensions (mm) | | | | | | Applicable shank |

| ø32 | 5.0 [N·m] |

Internal coolant: Piping connections

1 Screw standard for shank back end (pipe connection)

- The thread standard depends on the description. Please refer to the dimension chart “G” on page 10 when using commercially available piping parts.
- When using our piping components, they must be converted to “UNF3/8” or “G1/8.” Check the table below and select the required joint parts (sold separately).

● Steel shank (Pressure ~ 7MPa)

| Type | Thread Standards and Conversion Joints |
|----------------------|--|
| ø16-7D | G1/8 |
| ø20-7D ø25-7D/10D | G1/8 ⇐ G1/4 J-ST-G1/4-G1/8 |
| ø32-7D/10D | G1/8 ⇐ G1/4 ⇐ G3/8 J-ST-G3/8-G1/4 J-ST-G1/4-G1/8 |

If a leak occurs, use a commercially available washer.

Joint

| Shape | Description | Availability | Thread Standard |
|-------|----------------|--------------|-----------------|
| | J-ST-G1/4-G1/8 | ● | G1/4 ⇔ G1/8 |
| | J-ST-G3/8-G1/4 | ● | G3/8 ⇔ G1/4 |

Precautions

1. Make sure machine door is completely closed before use of these parts.
2. Use appropriate seal for the male thread of the piping parts and make sure the connection is secure. Use plugs to seal off unused coolant holes.
3. Connect and fasten the coolant hose firmly.
4. The use of copper washers may cause leakage but will have no effect on the performance.
5. Commercial piping parts can be used if the thread standards are same. Check the pressure resistance before use.
6. Regularly changing the coolant filter is recommended.

Precautions

About the Dedicated E-Sleeve

The shank does not have a flat cut. In order to ensure vibration-proof performance, we recommend using a special sleeve (SHS ****_**) that is sold separately.

How to adjust cutting edge position

When using a head flat cut part

After attaching the tool to the machine, move the tool turret against the flat cut part of the head with a dial gauge, etc., and make sure that it is parallel to the sliding surface (X axis).

When using the reference lines of the shank/dedicated sleeve (E-Sleeve)

Align the reference lines printed on the shank and the dedicated sleeve (SHS ****_**). It is possible to more easily adjust the cutting edge position than using the head flat cut part.

Recommendations for internal coolant

Under high temperatures, the anti-vibration mechanism may deteriorate or be damaged.

Please use with **internal coolant**.

The coolant pressure resistance of the shank is 7 MPa. However, when using coolant parts (PR07-ST-UNF 3/8) for internal coolant in the carbide reinforced shank (KAV-G ***), the coolant pressure is 1 MPa. Please be careful.

Coolant parts (PR07-ST-UNF3/8)

Available overhang length range

Available overhang length is set for this tool

To adjust the overhang length, please use the reference line printed on the shank.

| Available overhang length range | | |
|---------------------------------|-------------------------|-------------------------|
| Description | Minimum overhang length | Maximum overhang length |
| KAV-***-10D | Shank diameter × 7 | Shank diameter × 10 |
| KAV-***-7D | Shank diameter × 4 | Shank diameter × 7 |

Shank cut

If the shank needs to be cut or modified, do so within the cutting range and do not clamp the built-in damping mechanism.

- Use the appropriate inserts and parts. Use of damaged parts may result in tool breakage and injury.
- Do not touch the cutting edge of the insert directly with your bare hands. There is a risk of injury.
- Make sure that there are no foreign materials such as chips in the insert seating area, serrated area, or shank grip area before mounting.
- Do not use the product under chattering conditions. This can lead to damage of the built-in damping mechanism.
- If tool falls or hits the part while machining, do not use it. The impact can cause tool damage and lead to large chattering.
- Avoid high humidity and store at room temperature (about 20°C).

|Anti-Vibration| Max L/D = 10

Interchangeable head boring bars
with anti-vibration dampener system

KAV Series
